

Sage 50 Health Check

The following Sage 50 Health Check questions are devised to make sure the technology that is at the centre of your business is still able to carry out one of the most important roles to drive your business forward.

- 1. Has the total number of users in your system grown considerably? (i.e. Does someone have to log out for someone to log in?)**
- 2. Are you spending hours using excel spreadsheets to create manual reports?**
- 3. Is your system really slow? Is it driving you mad?**
- 4. Do you need remote access to your accounts when out of the office?**
- 5. Is it time to move away from a fixed platform to a richer unlimited SQL Database?**

Sage 50 Accounts is built for the entry level marketplace from business start-up to more established small businesses. However as your business grows and expands Sage 50 Accounts will struggle to keep up. Costing your business valuable efficiency and money in carrying out time consuming manual tasks, eating away at vital profit margins.

Book a check-up with the Doctors* to discuss your System Results...
